

DICHROICS - ART GLASS ALL DRESSED UP

Dichroic-coated glass is fantastic. It is man-made, yet we are continually drawn to it; mesmerized by the play of light across and under its surface. Although developed in the laser industry, dichroic-coated glass found its way into the realm of creative expression. How is it created? How is it used in the Art Glass industry? How does it react to heat, light and layer? This book will provide insight and inspiration. Discover that the distance from the coldness of space to the heat of the kiln is shorter than you think. 64 pages, in english.
