

PROXXON MICROMOT ADAPTER NG2/S 12V-24W

MICROMOT mains adapter NG 2/S. Very compact design. NORYL casing (heat resistant - a necessity for transformer enclosures). Red LED indicates readiness for use. PTC (Positive-Temperature-Coefficient) element prevents overload (and plugged-in tool will not restart automatically). Practical design with holes for storing bits. Foldable tool rest provides a secure place for keeping the MICROMOT tool on standby. Version without electronic speed control.
220-240 Volt

The drilling machine is not included.
