

PHOTO FUSING DECAL PAPER - 10 SHEET

For the first time, home hobbyists, professional studios, schools and artists can easily, safely and inexpensively fire high quality photographs, graphics and text onto their fused glass projects. All you need is : The special transfer paper
An HP Black and White laser printer
And access to a kiln.

This pack of 10 x 216 x 279mm (US standard paper size) sheets comes with easy to follow step by step instructions and the booklet contains more detailed instructions along with project ideas including how to add colour to sepia images.

Also included is an extensive list of printers that work with this process as well as a ramp and hold firing chart for firing glass in a ceramic kiln. Use one of the black and white printers listed below to print images or text onto the photo fusing paper and then fuse the image directly onto your glass work resulting in a vintage sepia effect. It is possible to add colour to your images by adding enamels or glass powders either on top of or under the image.

The following printers are compatible: HP Laserjet P1006, P1005, P1505, 1018, 1020, P2035, 1022, P2015, 2055, 3005, 4014, 4015, 5200, 4515, M1522n, 3052, 3055, M2727nf, M3027, M3035 and some older models.

PLEASE NOTE: If your printer is capable of printing in colour, this process will not work. It only works on a dedicated black and white printer. This process will work on any HP or Canon black-only laser printer or copier.
