

## GLASSWORKING SAFETY GLASSES - GREEN ACE IR 3.0 LENSES - CLIP ON FRAME

Designed to meet the need for the extra UV and IR protection needed when working on borosilicate glass. These lenses have been developed for the lampworking and glassblowing markets. This revolutionary product is greatly lighter than conventional laminated products and comes in a full coverage lens which this is a higher quality design because there are no areas without shading. Boroscopes should be worn when working on hard glass types where regular didymium are not adequate due to the fact of insufficient filtration of ultra violet and infra-red absorption. For use when working with Pyrex glass.

Shade 3.0 is lighter.

These clip-on glasses will fit over almost any style of glasses with comfort.
