

PORSINA - COLD PORCELAIN 250 GR

Porsina is a soft air-drying cold porcelain.

- It was specifically developed for creating realistic flowers but is also suitable for other modeling work.
- Always add white pigment to your Porsina, regardless of the color you will give it later, otherwise your creation will become translucent and unrealistic.
- Padico's Hearty Clay is perfect for adding color to Porsina. It has beautiful pigments that give the porcelain a very soft effect and make it even more pliable and flexible.
