

## DRIVER CUTTER 360 TAJIMA - 9 MM BLADE

This professional cutter is produced in Japan by TAJIMA, a specialized manufacturer in blade production since 1909.

- It is characterized by a reinforced guide frame (three times stronger than standard models) made with 1mm thick tempered stainless steel.
- It features a patented protrusion by TAJIMA (SUPER HARD TIP) that allows it to be used for other activities, such as a screwdriver, lifting tin can lids, or opening boxes without having to extend the cutter blade.
- TAJIMA Driver Cutters use RAZAR BLACK BLADE, special superior quality cutter blades made with the best SK-120 carbon steel that makes the blade particularly effective and resistant.
- RAZAR BLACK BLADE cutter blades undergo a special Japanese-style tempering process that improves the blade's resistance to breakage and extends the sharpness life.
- The sharpening of RAZAR BLACK BLADE cutter blades is particularly accurate and carried out through a process defined by TAJIMA as "multi-phase", which results in razor-sharp blades with an acute sharpening angle for particularly deep cutting.
- This version comes with a 9mm blade.
