

MILLEFIORI SLICES 175 D. 7-8 MM

Millefiori or **murrini** are one of the most characteristic products from the island of Murano, Venice. They are created by fusing a bundle of colored glass rods, then pulled until the desired diameter is obtained. After cooling the rod is cut by hand into small discs that can be used for fusing glass projects or mosaic projects.

All our Millefiori are made in Italy and compatible with *Murano glass* (COE 104): can be used with glass sheets, rods, frits of the same coefficient.

These millefiori are cut to standard height, 3 - 4 mm.

Please note: Dimensions are variable. Description shows the minimum and maximum diameter that you will find in the package.
