

PAINT CHARBONNEL LAMOUR BLACK SOFT

The Nero Lamour Incision Black Etching Paint is a soft, black powder paint.

- It is used to rework a plate that has already been etched with acid, usually following the mordant to give greater depth to the etched lines after another exposure to acid.
- However, it can also be used as soft paint.
- This product must be applied to the plate when it is warm.
- It dries slowly, remains flexible for a long time and gives a satin matte finish.
