

## AMSTERDAM 041 - PHOTO TRANSFER GEL

Amsterdam Photo Transfer Gel - Integrate Laser-Printed Images into Your Art

Amsterdam photo transfer gel has been specially developed to allow you to include laser-printed images in your work. **How to use:**

- Apply a layer of the transfer medium on the printed side of your laser-printed image or on the surface you'll be working on. Note that the image will be mirrored when transferred, so if you want to work with text, don't forget to mirror the image first!
- Place the printed side of the paper down on the surface you're working on, press down firmly and carefully rub away any air bubbles. Let dry for at least 24 hours.
- Moisten the paper using a moist cloth or sponge. Use your fingers or a dry cloth to rub off all of the paper, revealing the transferred image. This image can be painted over immediately.
- For an optimal result, apply a glossy varnish or an acrylic medium on top to eliminate the white film that may appear.

### Amsterdam Photo Transfer Gel

- Only suitable for laser-printed images, inkjet-printed images and photographs are not suitable
- Can be painted over with acrylic paint
- Waterproof when dry
- Clean utensils with water
- Apply at temperatures above 10°C and store free of frost
