

MAGNETIC DIAMOND LAP KGS SWISS DIAMOND

KGS magnetic-backed diamond grinding discs feature a metal-bonded construction, where diamond is embedded in a sintered metallic matrix and arranged in structured patterns to enhance material removal, water flow and debris evacuation. Designed for glass processing, they ensure consistent performance from coarse grinding to fine smoothing, with grit options ranging from 60 to 1500. Available in 300 and 600 mm diameters with 16 or 25 mm bore holes. **Key features**

- KGS professional quality
- Metal-bonded diamond layer for durability and stable cutting
- Patterned diamond structure for improved drainage and stock removal
- Magnetic backing for fast disc changes
- Suitable for roughing, smoothing and pre-polishing glass

Technical specifications

- Diameters: 300 mm, 600 mm
- Bore holes: 16 mm, 25 mm
- Available grits: 60, 120, 200, 400, 500, 800, 1500
- Bonding: metal bonded (sintered)
- Abrasive: diamond
- Backing: magnetic
