

PURE GOLD LEAF PAILLONS

Pure gold paillons with a thickness of 14 microns, laser-cut for maximum precision and consistency. Available in two versions – five-point stars or round elements – they enhance artistic and decorative creations with refined, luminous details. Their resistance to high temperatures makes them suitable for hot-working techniques such as enameling and glass fusing. **Key features**

features

- Pure gold, 14 micron thickness
- Laser-cut for precise and uniform shapes
- Two versions: stars or round shapes
- High visual impact and brilliance
- Heat-resistant for hot applications

Technical specifications

- Material: pure gold
- Thickness: 14 microns
- Available formats: 10 stars (2 mm) or 18 round pieces
- Round diameters: 1.3 / 1.6 / 2 mm
- Production: laser cutting
- Applications: enameling, glass fusing, artistic decoration

SKU F008028

INSTRUCTIONS

Instructions of usage

- To make handling easier, gently pick up the paillons one by one using a slightly damp brush.
- For use with kiln-fired enamel, place the paillons onto an already fired enamel layer and perform an additional firing to secure them.
- Ensure the paillons are sufficiently fired before touching them; insufficient firing may result in uneven adhesion and possible breakage or detachment.
- Gold paillons withstand more than 10 firings at 800°C and are suitable for being covered with enamel.
