

PROMETHEUS JEWELLERS GREENISH YELLOW BRONZE CLAY - PGY

Prometheus Jewellers Greenish Yellow Bronze is a bronze-based metal clay that, after firing, develops a colour similar to 9 carat gold with a subtle greenish tone. It is composed of very fine bronze particles mixed with an organic binder and formulated **nickel free**. **Main features**

- Completely nickel free
- Colour similar to 9 carat gold with a slight green hue after firing
- High percentage of ultra-fine bronze particles
- Ideal for jewellery, micromodelling and decorative objects

Paste version

- Can be shaped by hand
- Carved and engraved
- Cut with precision tools
- Used with silicone moulds or textures
- Mixed with water to create a brushable cream

Syringe version

- Perfect for fine decorative lines and filigree
- Allows creation of hollow 3D structures
- Suitable for precise assembly and detailed applications

After drying and firing according to technical specifications, the piece can be finished by sanding, polishing or patinating.

SKU F008131

INSTRUCTIONS

Firing method With Activated Carbon

- Step 1:** place the dry piece on a stainless steel mesh, insert into a cold kiln and heat to 500 °C for 15 minutes. Allow to cool.
- Step 2:** place approximately 3 cm of activated carbon at the bottom of a steel container, position the pieces at least 1.5 cm apart and fully cover with carbon. Close the container, place in a kiln preheated to 800 °C and fire for 60 minutes. Allow to cool inside the kiln.

Shrinkage: 13–14%
