

EMBEDDABLES BAIL FOR COPPER CLAY

This copper Embeddables pendant bail features a slightly domed, tapered design, ideal for completing Copper Clay pendant pieces before firing. The peg can be easily pushed into the unfired clay, ensuring a secure hold during firing. Versatile in use, it is also suitable for glass fusing techniques and polymer clay designs. Listed dimensions refer to the internal hole size. **Key features**

- Made of copper
- Slightly domed, tapered design
- Peg insert for unfired material
- Suitable for firing with Copper Clay
- Compatible with glass fusing and polymer clay
- Secure and integrated attachment point

Technical specifications

- Material: copper
- Type: embeddable pendant bail with peg
- Compatibility: Copper Clay, glass fusing, polymer clay
- Application stage: before firing
- Mounting method: direct insertion into unfired material
- Listed dimensions: internal hole size
- Heat resistance: suitable for firing with Copper Clay
