

COLOROBRIA TERRA BELLA REACTIVE GLAZES

Terra Bella reactive glazes are colors inspired by nature, ideal for obtaining with low temperature firing (1000 ° C), effects that until now can only be achieved with **stoneware glazes** (1300 ° C).

With these glazes, no piece will be the same: depending on the color, the finishes can be matt or glossy with variations in color that will make your projects unique.

The blue colors, Jadeite and Reactive White will be extremely bright after firing, while the colors San Fran Fog, Sugebrush, Sonoma, Siena are opaque with multi-tone effects.

Using the color Egyptian Blue with the **Mystic White**, you will get very special reactive patterns.

The other blue colors of the range, used in combination with the Mystic White will form small circular patterns.

The color *Rustic Brown* is the only color that does not include glaze: it is designed to be used underglaze or overglaze the others Terra Bella colors to create incredible rust or antique effects. To be applied only 1 coat.

The Terra Bella glazes are perfectly combined with all the other Colorobbia line glazes and are *non-toxic*: they can be used on food contact surfaces.

How to use

- Mix the color well.
- Apply 2-3 coats on biscuit. If using reactive white, first apply a layer of enamel and then the layer of reactive white (do not mix).
- Fire at a temperature of 950 - 1000 ° C
- Clean the brushes or tools used to decorate with water.
